145669d Experimental and predicted atomization energies of rare-earth diaurides. Gingerich, K. A. (Dep. Chem., Texas A and M Univ., College Station, Tex.). *Chem. Phys. Lett.* 1972, 13(3), 262-5 (Eng). The atomization energies for the gaseous mols. LuAu_2 , HoAu_2 , and TbAu_2 . ΔH_a° (atomization) = 143.9 ± 8 , 131.1 ± 8 , and 143.3 ± 8 kcal/mole, resp., were detd. from measurements, by high-temp. Knudsen-cell mass spectrometry, of the equil. $\text{LnAu}_2(\text{g}) + \text{Ln}(\text{g}) = 2\text{LnAu}(\text{g})$ [$\text{Ln} = \text{Lu}$ ($2186-452^\circ\text{K}$), Ho ($2058-103^\circ\text{K}$), Tb ($2058-103^\circ\text{K}$)] and $\text{HoAu}_2(\text{g}) + \text{Tb}(\text{g}) + \text{TbAu}_2(\text{g})$ ($2058-103^\circ\text{K}$), and the exchange reactions $\text{LnAu}(\text{g}) + \text{Au}(\text{g}) = \text{Ln}(\text{g}) + \text{Au}_2(\text{g})$ [$\text{Ln} = \text{Ho, Lu, Tb}$] and $\text{HoAu}(\text{g}) + \text{Tb}(\text{g}) = \text{Ho}(\text{g}) + \text{TbAu}(\text{g})$. The measured atomization energies, which indicated the mol. structure Au-Ln-Au , agreed with the values calcd. with the Pauling model of a polar bond by assuming 2 polar single bonds. The other rare-earth metals are also expected to form stable diaurides with atomization energies close to those calcd. with the Pauling model.

16 Б730. Экспериментальные и расчетные значения энергий атомизации диауридов редкоземельных элементов. Gingerich K. A. Experimental and predicted atomization energies of rare-earth diaurides. «Chem. Phys. Lett.», 1972, 13, № 3, 262—265 (англ.)

Масс-спектрометрически исследованы обменные р-ции в газ. фазе с участием моно- и диауридов Lu, Ho и Tb, а также газ. Au, Lu, Ho, Tb в интервале т-р 2060—2450° К. По З-му закону рассчитаны значения ΔH°_0 этих р-ций. Рассчитаны энергии связи LuAu (78,5), HoAu (60,5) и TbAu (66,8 ккал/моль) и энергии атомизации молекул LuAu₂ (143,9); HoAu₂ (131,1) и TbAu₂ (143,3 ккал/моль). Расчет энергии связи в моно- и диауридах с использованием модели одинарной полярной связи Полинга приводит к хорошему согласию с экспериментом.
